Education - Hill House School (2016 - 2025)

GCSE: 9, 9, 9, 9, 9, 8, 8, 8, 8

A-level: A*, A, A, B - Computer Science, Maths, Physics and Further Maths

Experience

Systems Configuration Engineer - Anglian Water - September 2025 - Present

- Owned full product Software Development Lifecycle's (SDLC), communicating with stakeholders to gather technical and non functional requirements, producing Minimum Viable Products (MVP's) and Proof of Concepts (PoC).
- Reduced **SAP** account lookup API timeout rate by **~9%** via interrogating integration **bottlenecks** and submitting a **PR** adopted by the vendor, utilising an **Azure SQL DB** failover, improving **IVR payment journeys** for **7,000+** customers per week.
- Developed a **knowledgebase search** platform with Apache Lucene, used by **1000+** agents achieving **~200ms** average response times - resulting in an **8x** improvement from the legacy system, reducing agents' handle time.
- Refactored** legacy software into modern, scalable solutions using **Angular (TypeScript)**, **C# .NET** and **Azure Functions**, incorporating comprehensive logging with **Azure Application Insights**, resilient error handling and retry mechanisms with event driven architecture. Applied Defence in Depth through layered security controls, including OAuth 2.0, JWT-based authentication and Role-Based Access Control (RBAC), to secure application access.
- Wrote extensive unit test suites for **TDD** (Test Driven Development), ensuring high code coverage for frontend using **Karma** and **Jasmine**, and backend with **MSTest** and **Moq** significantly improving deployment confidence.
- Performed **DevOps** Engineering by managing the **Azure Cloud** infrastructure, minimising costs whilst maintaining scalability:
 - Wrote multistage **CI/CD pipelines** integrating linting, **automated unit testing** and **SonarQube** (SAST) code quality scanning - reducing risk of poor quality code reaching production.
 - Developed Infrastructure as Code (**IaC**) with **Azure Bicep** for consistent cloud infrastructure deployments, provisioning **horizontal scaling** to handle **10,000+** weekly requests, routing traffic through a WAF for layer 7 protection.
 - Implemented **Blue Green** and **Canary** deployment strategies, enabling low risk releases and reliable rollbacks.
- Reduced call centre load by **~3%** by optimising IVR payment callflow routing logic, improving customer self service capabilities.
- Managed the **SaaS** systems supporting the call center, providing front line technical support via (**ServiceNow**), investigating and assisting **P1/P2** outages and **incident / problem management** to maintain high platform availability, adhering to SLA's.
- Audited permissions across the call center, enforcing the **principle of least privilege** reducing security risks.

Junior Software Developer Work Experience - PSP IT Software Development Solutions - April 2024

- Created an automated mail system in **C# .NET** capable of processing **1000+** emails - backed by a SQL database utilising atomic transactions to preserve **ACID** compliance.
- Developed a RESTful API using **ASP.NET CORE** to manage a remote **SQL** database to perform **CRUD** operations.
- Attended board meetings to oversee the **agile** methodology and product lifecycle in action, and how tasks are delegated in sprints with **Azure DevOps** for peak efficiency.

Software Engineering Fellowship - Headstarter AI - July 2024 - September 2024

- Built and deployed 5 **full-stack** AI integrated applications with a team, leveraging **CI/CD** processes alongside modern cloud (**Amazon AWS**), AI (**OpenAI/Langchain/Pinecone**), and web development technologies (**NextJS**), abiding by **strict deadlines**.
- Participated in weekly hackathons in a **team environment** utilising **Github** for collaboration, adopting hundreds of site visits.

Key Projects for Headstarter AI

- NextJS** Pantry Tracker for remote inventory management via a **CRUD REST API** backed by a **Google Firebase NoSQL** DB.
- Developed a bespoke Customer Support **AI chatbot**, reducing hallucinations on a lightweight LLM by **~80%**, through a Retrieval Augmented Generation (**RAG**) pipeline utilising **Pinecone** as a **Vector DB**.
- "AI Mechanic"** which scrapes vehicle specifications alongside recall information, providing predictive car maintenance support.
- StudyEngine - AI powered revision platform - flashcard/quiz generator, AI teaching assistant and a revision scheduler - scoring 70/70 as my NEA coursework project: **NextJS, Amazon AWS, Google Firebase, Clerk, OpenAI**

Leadership

- Anglian Water - **Lead** the Full Stack software development for the team, mentoring and **upskilling** team members to modern development standards and best practices (e.g **OWASP Top 10, SOLID** principles), increasing team contributions and improving delivery.
- Delivered an engaging presentation on the "Future of AI" to students at Hill House School, receiving significant positive feedback

Programming Languages / Tools

Languages / Scripting: **JavaScript / TypeScript, C#, HTML, CSS, Python, SQL, Azure Bicep (IaC), YAML (CI/CD)**

Frameworks / Libraries: **Angular, NextJS, React, Node, .NET, Entity Framework, Flask, Puppeteer**

Platforms: **Azure Cloud, Azure DevOps, GitHub (Git), Google Firebase, Amazon AWS, Langchain, Pinecone, ServiceNow, Figma**
