Iman Jimoh

London, UK | 07733134882 | imanj1470@gmail.com | github.com/imanj1470 | linkedin.com/in/imanjimoh

Education

King's College London - BSc (Hons) Computer Science *September 2026 – June 2029*

- *Predicted First Class* | Modules: Data Structures, Database Systems, Object Oriented Programming (Java)
- Societies: Muay Thai, Brazilian Jiu-Jitsu, Chess, Competitive Programming, Robotics

Hill House School | Doncaster *September 2016 – June 2025*

A-levels: **A*AAB** - Computer Science (**A***), Maths (**A**), Physics (**A**) and Further Maths (**B**)

- Computer Science NEA Coursework project: **70/70 (100%)** – Highest Score in Class

GCSE: **9, 9, 9, 9, 9, 8, 8, 8, 8** – **Academic Scholarship** - including Maths, Further Maths, Computer Science, English

Work Experience

Systems Configuration Engineer | Anglian Water | Lincoln, UK *September 2025 – Present*

- **Led** the software development for the team, mentoring and upskilling two team members to modern standards and best practices (e.g **OWASP** Top 10, SOLID / DRY principles), increasing team contributions and improving delivery.
- Reduced SAP account lookup API error rate by 9% and **cut P50 latency** by **73%**, improving IVR payment journeys for **7,000**+ weekly customers via implementing an Azure **SQL** DB failover, submitting a PR adopted by the vendor.
- Developed a knowledgebase search platform used by 1000+ agents achieving **200ms** average response times, reducing agents' handle time. Used **Apache Lucene** for performant keyword and fuzzy text matching improving search UX.
- Wrote extensive unit test suites achieving **90%+ code coverage** across all products, following **TDD / BDD** (Behaviour / Test Driven Development) with Karma/Jasmine and MSTest/Moq, improving deployment confidence.
- DevOps Engineering - managed the Azure Cloud infrastructure, minimising costs whilst maintaining scaleability:
  - Developed multistage **CI/CD** pipelines integrating linting, **automated unit testing** and SonarQube (**SAST**) code quality scanning - reducing risk of poor quality code reaching production.
  - Wrote Infrastructure as Code (**IaC**) with **Azure Bicep** for consistent cloud infrastructure deployments, provisioning **horizontal scaling** to handle **10,000+** weekly requests.
  - Implemented **Blue Green** and **Canary** deployment strategies, enabling low risk releases and reliable rollbacks.
- Reduced technical debt by 90% via refactoring two legacy products to **Angular (TypeScript)** and **C# .NET** on **Azure Functions**, secured via **OAuth 2.0** and **RBAC** and observability through **Azure Application Insights**.
- Owned the full SDLC for an outbound dialler bot automation platform, translating stakeholder requirements into an Agile MVP that eliminated a weekly manual process - providing a foundation for future automations.

Software Engineering Fellowship | HeadstarterAI | Remote *July 2024 – September 2024*

- Built and deployed 5 full-stack AI (**LLM / RAG**) applications using *Next.js, OpenAI and Pinecone*, following CI/CD practices with a focus on rapid product iteration and SEO within a team of 3, reaching 50 waitlist signups in a week.

Junior Software Developer | PSP IT | Spalding, UK *April 2024*

- Developed an automated mail worker service in **C#** .NET capable of processing **1000**+ customer emails - utilising transactions in a **SQL** database ensuring **ACID** compliance for data integrity, removing vendor dependency.

Projects

IMC Prosperity 4 Quant Trading Competition | **IMC Trading** | Python

- **Finalist** in the IMC Quant Trading Challenge, placing **Top 4.08% Globally** out of 18,803 teams. Completed 5/5 rounds through implementing algorithmic strategies in **Python**, such as mean reversion and statistical arbitrage.
- Achieved a final PnL of 257,000 via a **Black-Scholes** options market-making model in Python, combining volatility estimation, mispriced options arbitrage and dynamic hedge rebalancing to manage risk across 10 option instruments.

RightMove Property Bot | **Python, Playwright, SQLite3** | Request Access / Demo *(Private GitHub Repo)*

- Cut down property search by **90%**, via developing an automated **webscraping** pipeline to scrape and filter 1000+ property listings into a **SQLite** database, saving approximately 50+ hours of manual searching.
- Developed a **multi-field ranking system** which uses weighted averages to score and penalise, keyword filtering and factors in work commute time from the Google Maps API to remove unsuitable properties based upon preference.

Additional Information

Programming Languages: JavaScript / TypeScript, C# .NET, Python, HTML, CSS, SQL, Azure Bicep (IaC)
Frameworks and Libraries: Angular, NextJS, React, Node.js, Entity Framework (.NET), Flask, Playwright
Platforms and Tools: Microsoft Azure Cloud, Azure DevOps, Git (GitHub), ServiceNow, Figma, Postman
Interests: Mixed Martial Arts, Hiking, Gym, Robotics, Chess, Rubiks Cube, Gaming, Device Repair
