Education - Hill House School (2016 - 2025)

GCSE: **9, 9, 9, 9, 9, 8, 8, 8, 8**

A-level: **A*, A, A, B** - Computer Science, Maths, Physics and Further Maths

Experience

Systems Configuration Engineer - Anglian Water - September 2025 - Present

- **Lead** the Full Stack web development for the team, mentoring and **upskilling** team members to modern internal development standards and best practices, increasing team contributions and improving delivery.
- Developed an accurate and forgiving **knowledgebase search platform** with Apache Lucene, used by **1000+** agents achieving ~ **250ms** average response times - resulting in an **8x** improvement from the legacy system increasing agents efficiency.
- **Refactored legacy software** into modern, scalable solutions with **Angular (TypeScript)**, **C# .NET** with **Azure Functions** applying extensive logging, robust error handling and retry mechanisms. Implemented **OAuth** and **JWT** based authentication with Role-Based Action Control (**RBAC**) for improved security.
- Wrote extensive unit tests ensuring high code coverage for frontend using **Karma** and **Jasmine**, and backend with **MSTest** and **Moq** significantly improving deployment confidence.
- Performed DevOps Engineering duties - managed the **Azure Cloud** infrastructure, minimising costs whilst maintaining scalability:
 - Wrote multistage **CI/CD pipelines** integrating linting, **automated unit testing** and Sonar code quality scanning - reducing risk of poor quality code reaching production.
 - Wrote Infrastructure as Code (**IaC**) with **Azure Bicep** for consistent cloud infrastructure deployments, utilising **horizontal scaling** to handle **10,000+** weekly requests.
 - Implemented **Blue Green** and **Canary** deployment strategies, enabling low risk releases and reliable rollbacks.
- Optimised customer facing IVR Payments callflow routing, improving self service capabilities, reducing call center load by ~**3%**.
- Managed the **SaaS** systems supporting the call center, providing front line technical support via a ticketing system (**ServiceNow**), investigating and assisting **P1/P2** outages and incident/problem management to maintain high platform availability.
- Audited permissions and access controls across the call center, enforcing the **principle of least privilege** to reduce security risks.

Work Experience - PSP IT Software Development Solutions - April 2024 - *(reference available upon request)*

- Created an automated mail system in **C# .NET** capable of processing **1000+** emails - backed by a SQL database utilising atomic transactions to preserve **ACID** compliance.
- Developed a REST API using **ASP.NET CORE** to manage a remote **SQL** database to perform **CRUD** operations.
- Attended board meetings to understand the **agile** methodology and product lifecycle in action, and how tasks are delegated in sprints with **Azure DevOps** for peak efficiency.

Software Engineering Fellowship - Headstarter AI - July 2024 - September 2024

- Built and deployed 5 **full-stack** AI integrated applications with a team, leveraging **CI/CD** processes alongside modern cloud (**Amazon AWS**), AI (**OpenAI/Langchain/Pinecone**), and web development technologies (**NextJS**), abiding by **strict deadlines**.
- Participated in weekly hackathons in a **team environment** utilising **GitHub** for collaboration, managing Pull Requests.
- Data structures and algorithms practice, alongside interview preparation to build upon skills to make a well rounded candidate.
- Weekly meetings with **FAANG** employees to gain insight and preparation for the career of a software engineer.

Projects for Headstarter AI

- **NextJS** Pantry Tracker website enabling remote inventory management via a **CRUD API** backed by a NoSQL DB.
- Developed a bespoke Customer Support **AI chatbot** using Retrieval Augmented Generation (**RAG**) pipeline to deliver personalised, up to date responses.
- Built an AI driven professor recommendation platform using **Puppeteer** for web scraping, fed through a **RAG** pipeline with **Pinecone** as a vector DB for contextual responses.
- **"AI Mechanic"** which scrapes vehicle specifications alongside recall information, providing predictive car maintenance support.

Other Projects

- StudyEngine - AI powered all in one revision platform for students - AI flashcard/quiz generator, AI teaching assistant and a revision scheduler: **NextJS**, **Amazon AWS**, **Google Firebase**, **Clerk**, **OpenAI**
- Fully automated "Homework Completer" bot in **Python** for the platform **Memrise** using **Selenium** for web scraping.
- Integrated an **LLM** for a voice assistant using **Python** to boost productivity and to automate basic tasks.

Programming Languages / Tools

Languages / Scripting: **JavaScript / TypeScript**, **C#**, **HTML**, **CSS**, **Python**, **SQL**, **Azure Bicep (IaC)**, **YAML (CI/CD)**

Frameworks / Libraries: **Angular**, **NextJS**, **React**, **Node**, **.NET**, **Flask**, **Puppeteer**

Platforms: **Azure Cloud**, **Azure DevOps**, **GitHub (Git)**, **Google Firebase**, **Amazon AWS**, **Langchain**, **Pinecone**, **ServiceNow**, **Figma**
